New isolated Treponema pallidum nucleic acids - used to develop products for the detection, diagnosis, characterisation, prevention and therapy of T. pallidum infections, particularly syphilis claim 1, Page 230-237; 1150pp; English.

X20500-21243 represent polynucleotide sequences from the genome of Treponema pallidum. The sequences can be used for detection, diagnosis, characterisation, prevention and therapy for T. pallidum infections, particularly syphilis. They can also be used for detecting diseases related to Borrella infections in animals, and for the production of biosynhetic products such as enzymes. Sequence 12838 BP; 3171 A; 4046 C; 2834 G; 2770 T;
                                                                                                                                                                                                                                                                                                                      05-MAY-1999 (first entry)
Polynucleotide sequence from the genome of Treponema pallidum.

Human heat shock protein (hsp70B) gene, target region.
DNA protein-binding assay; tests sequence; screening sequence;
promoter; target: ARM box; Herpes Simplex Virus; HSV;
origin of replication; UL9; transcription factor; TFIID, ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence-directed DNA-binding molecules - useful in pharmaceuticals and as molecular reagents Claim 28; Page 303; 587pp; English.
A DNA protein-binding assay is provided, useful for screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (GENE-) GENELABS TECHNOLOGIES INC.

PT (Polynucleotide(s) and proteins derived from Staphylococcus aureus - stored on computer readable medium and used in the production of anti-S. aureus vaccines

PT (Polynucleotide(s) and proteins derived from the production of anti-S. aureus vaccines

PT (PIS aureus vaccines)

CC (This sequence represents one of 5191 Staphylococcus aureus DNA sequences

CC (The Finvention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access

CC (The S. aureus DNA sequences and prophy or CD-ROM. Homology searches using the protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S. aureus infection of the jupplicated in numerous human diseases, including cellulitis, eyelid infections, scalded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences can be used commercial as primers or probes for isolating commiter readable medium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        16-MR-1999 (first entry)

Libraries of synthetic or biological cpds. for their ability

to bind DNA test sequences. The assay is versatile in that any
number of test sequences can be tested by placing the test sequence
adjacent to a defined protein-binding screening sequence. Binding
of mols. to these test sequences changes the binding characteristics
of the protein mol. to its compate binding sequence. When such a mol.
binds the test sequence, the equilibrium of the DNA:protein complexes
is disturbed, generating changes in the concentration of free DNA probe.
One application of this method is to eucaryotic general transcription
factors (e.g. TFIID), where the target region is typically selected
from DNA sequences adjacent to the binding site for the eucaryotic
transcription factor. Numerous exemplary test sequences are given:
the sequences in g08251-731 and g08850 correspond to promoter targets
(typically, TATA box-confg. sites) for human genes and the sequences in
609732-849 correspond to promoter targets for viral genes. The test
sequences may also be randomly generated. DNA:protein interaction may
be used for screening purposes, e.g. the Herpes Simplex Virus (HSV)
origin of replication and ULD9 (see Q69851-52, Q69865 and Q69891).

The sequences given in 763713-4312 represent duplex DNA's which act as target regions in the method of the invention. The method for altering the binding characteristics of a DNA-binding protein to duplex DNA comprises contacting the duplex DNA with a small molecule which binds sequence-specifically to a target region, where, when the small molecule is bound to the target region, it is adjacent to, but not overlapping by more than 4 bp, a binding site for a DNA-binding protein. The small molecule is added at a concentration effective to alter the binding of the DNA binding protein, pref. TFIID, to its binding site on the binding of the binding of the small molecule may inhibit or enhance the binding of the binding protein to its binding site. The compounds isolated using this method are potentially useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      14-MAR-1997 (first entry)
Human hsp70B gene TFIID binding site.
Humban by 10 gene TFIID binding site.

Per mination of DNA sequence preference of a DNA-binding molecule - based on inhibition of binding of protein to oligonucleotide

For a sequence attached to test sequence

For sequence attached to test sequence

Claim 3; Columns 193-194; Z70pp; English.

Claim 3; Columns 193-194; Z70pp; English.

Consequences x17001 to x17600 represent specifically claimed target test

Consequences x17001 to x17600 represent specifically claimed target test

Consequences x17001 to x17600 represent specifically claimed target test

Consequences that are used in the method of the invention of determining the consequence preference of a DNA-binding molecule. The method comprises:

Consequence preference adjacent to a screening sequence, where the avoing a test sequence adjacent to a screening sequence, where the consequence binds to the DNA-binding protein with a binding a feature is independent of the DNA sequence of the test sequence, and where the mixture of duplex DNA test oligonucleotides includes caperally sequences; (ii) incubating the test molecule to test sequences in the duplex DNA test oligonucleotides and the DNA-binding protein for a time sufficient to permit binding of the test molecule to test sequences in the duplex DNA; (iii) separating unbound test oligonucleotides from test oligonucleotides; (v) repeating steps (ii) to (iv); (vi) isolating the amplified test oligonucleotides; and (vii) sequences X17600 correspond to promoter targets for numan genes and test sequences X17482-X17599 correspond to promoter targets for viral genes.

Sequence 46 BP; 4 A; 18 C; 20 G; 4 T;
therapeutic agents for treatment of any disease which involves a specific DNA sequence, e.g. cancer, or inherited genetic disorders etc. The method is suitable for screening large biological or chemical libraries and allows determination of sequence-specific and relative affinities of known DNA-binding agents for different DNA sequences. The design of these duplex DNA's allows a single DNA:protein interaction to be used for screening sequence-specific, or preferential, DNA binding proteins that recognise almost any possible sequence (see also 749539-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Test sequence from human hsp70B gene.

Spatial and temporal control of construct gene by heat shock
Spatial and temporal control of cherapeutic protein in cell mass,
especially for treating tumours tumours.

Claim 3; Fig 3c; 58pp; English.

Claim 3; Fig 3c; 58pp; English.

The Human HSP-70B promoter and its analogue from Drosophila (V21142) can
be activated using localised heat. The hsp 70B heat shock gene promoter
was used to control expression of a gene construct. This can be used for
the expression and production of therapeutic proteins in a preselected
region of a cell mass. This is especially useful for the targeted
expression of therapeutic proteins in a tumour such as a prostate tumour.

Human protein having transmembrane domain - useful for, e.g. research and nutrition leader and nutrition leader and nutrition leader and nutrition leader are sequenced and nutrition leader are cDNA sequences which encode human proteins containing a transmembrane domain. These proteins can be used for, e.g. research and nutrition, and may have cytokine and cell proliferation/differentiation, immune stimulating/suppressing, haematopolesis regulating, tissue growth, activin/inhibin, chemotactic/chemokinetic, haemostatic and thrombolytic, receptor/ligand, anti-inflammatory or tumour inhibition activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polypeptide(s) - useful in vaccines to treat or prevent H. pylori infection and for diagnosis of H. pylori infection.

Claims 5,6,42, Page 327; 1145pp; English.

This sequence encodes a H. pylori cytoplasmic protein.

The protein may be used in a vaccine to prevent or treat H. pylori. Infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors.

The DNA and probes derived from it may be used for the identification of H. pylori in a sample, and the diagnosis of the pylori infection. Nucleic acid sequences complementary to the DNA act as antisense sequences, and can be used to prevent the translation of H. pylori mRNA. Antibodies against the protein can be used in immunosasays to evaluate the abundance and distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   30-JUN-1998 (first entry)

New metazoan parasite antigens - which bind to host immunoglobulin, used to prepare vaccines for protection against metazoan parasites of Claim 23; Fig.27C; 93pp; English.

This cDNA encodes IGBP-MC (an immunoglobulin binding protein) from the male tick. This sequence may be expressed recombinantly for the male tick. This sequence may be expressed recombinantly for the production of the protein which is capable of binding host Ig as a vaccine target, thereby depriving the parasite of an important means of defence against the immune response of the host. The encoded antigenic protein can be used in vaccines for stimulating an immune response against metazoan paraistes in humans or animals. They can be used for protection against helminths and arthropod parasites e.g. files, ticks, mites, fleas or bugs.

Rhipicephalus appendiculatus protective antigen IGBP-MC CDNA.
Rhipicephalus appendiculatus protective antigen; metazoan parasite; vaccine; helminth; arthropod; fly; mite; flea; immunoglobulin binding protein; IGBP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /*tag= b
/note= "identical in N-terminal/translated sequence"
(ATCC 55679) was determined irom overing the sequences were analysed for ORP of at least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR amplification for recombinant polypeptide production, e.g. in E. coli hosts. relicable (s) - useful in vacine sequences and encoded polypeptide(s) - useful in vacines to treat or prevent H. pylori infection and for diagnosis of H. pylori infection.

This sequence encodes a H. pylori protein of unspecified function.

This sequence encodes a H. pylori protein of unspecified function.

This sequence encodes a H. pylori protein of unspecified function.

The protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. pylori life cycle activators or inhibitors. The useful as potential H. pylori life cycle activators or inhibitors. The broad and probes derived from it may be used for the identification of H. pylori in a sample and the diagnosis of H. pylori mRNA. Antibodies can be used to prevent the translation of H. pylori mRNA. Antibodies and distribution of H. pylori-specific antigens. The genomic sequence of H. pylori (ATCC 55679) was determined from overlapping contigs generated correction of H. pylori-specific antigens. The sequences were analysed for computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from a pylori or prodict in the prediction or in P. Coli

Example 13; Columns 127-128; 145pp; English.

The present sequence encodes a glutathione-S-tramsferase (GST)-monokine and present sequence encodes a glutathione-S-tramsferase (GST)-monokine that is an inhibitor of angiogenesis. The specification describes methods for inhibiting angiogenesis or for inducing angiostasis, using chemokines (with a conserved Cys Xaa Cys (CXC) sequence at the N-terminal) other than platelet factor-4, and which do not contain the amino acid sequence ELR. The methods are useful for inhibiting tumour growth and metastasis and for treating diseases such as heemangiomas, rheumatoid arthritis, atheoraceleosis and idiopathic pulmonary fibrosis (IPF), benign prostatic hypertrophy (BPH), vascular restenosis, arteriovenous malformations (AVM), meningioma, necovascular glaucoma, psoriasis, anglofibroma, heemangioma, necovascular glaucoma, psoriasis, anglofibroma, communioma retrolental fibroplasia, soleroderma, trachoma, vascular dhesions, synovitis, dermatitis, endometriosis, pterygium, diabetic retinopathy neovascularisation associated with corneal injury or grafts, neaudoment and corneal injury or grafts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ATS.7.)

New isolated Treponema pallidum nucleic acids - used to develop products for the detection, diagnosis, characterisation, prevention and therapy of T. pallidum infections, particularly syphilis (laim 1; Page 1101; 1150pp; English.

X20500-21243 represent polynucleotide sequences from the genome of Treponema pallidum. The sequences can be used for detection, Treponema pallidum. The sequences can be used for detection, infections, particularly syphilis. They can also be used for detection infections, particularly syphilis. They can also be used for detecting diseases related to Borrelia infections in animals, and for the production of blosynthetic products such as enzymes.
                                                                                                                                                                                                                                                                                                                                       Polynucleotide sequence from the genome of Treponema pallidum.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence encodes a gultahione-S-transferase (GST)-monokine induced by gamma-interferon (MIG) fusion protein. MIG is a CXC chemokine that is an inhibitor of angiogenesis. The specification describes methods for inhibiting angiogenesis or for inducing angiostasis, using chemokines (with a conserved Cys Xaa Cys (CXC) sequence at the N-terminal) other than platelet factor-4, and which do not contain the amino acid sequence ELR. The methods are useful for inhibiting tumour growth and metastasis and for treating diseases such as heemangiomas, rheumatoid arthritis, atherosclerosis and idiopathic pulmonary fibrosis (IPF), benign prostatic hypertrophy (BPB), vascular restenosis, arteritorenous malformations (AVM), meningioma, neovascular glaucoma, psoriasis, angiofibroma, haemophilic joints, hypertrophic scars, Osler-Weber syndrome, pyogenic granuloma retrolental fibroplasia, scleroderma, trachoma, vascular ethiopathy neovascularisation associated with corneal injury or grafts, adult respiratory distress syndrome (ARDS), chronic bronchitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New human C-type lectin and related nucleic acid, vectors, transformed cells - antibodies, agonists and antagonists, for diagnosis, prevention and treatment of cancers (laim 5; Page 47; 640; English Recombinant cells containing expression vectors comprising this CTL-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human C-type lectin-1 (CTL-1) coding sequence.

coding sequence can be used to produce recombinant CTL-1 which is useful for raising Ab and to screen for specific binding agents.

Binding agents which are antagonists of CTL-1 can be used to treat or prevent cancer. e.g. of ovary, paraganglion, penis, brain, thyroid and heart which are associated with overexpression of CTL-1. Fragments of this sequence are used to diagnose these conditions, as probes or primers in usual hybridisation and/or amplification assays, or for gene mapping, while complements of this sequence, antisense or ribozyme sequences are used to treat or prevent the aforementioned cancers also. Ab are used directly as provent the aforementioned cancers also. Ab are used directly as antagonists or for delivery of therapeutic agents to cells that express CTL-1. CTL-1 includes a carbohydrate-recognition domain (aa35-149) and also a transmembrane domain, but no secretory signal. CTL-1 shows homology with human CD69 (W85593), chicken 17.5.3 (W85594), sequence 655 BP; A; 96 C; 132 G; 180 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleotide sequence contg. the gene for Wilson disease - used to treat and detect Wilson disease
Example 3; Fig 11-2; 127pp; English.

The nucleotide sequence of the exon 5/intron borders of the gene encoding the copper transporting ATPase (ATP7B) associated with Wilson disease (WD; 086541). The exon sequence covers the transcript region from nucleotides 1777 to 1853. The ATP7B coding region covers around 40 kb of genomic DNA and is divided into 21 exons (see Q86542-Q86549 and 086300-Q86309 for other exon/intron borders). The gene can be used to treat Wilson disease, an autosomal recessive disorder of copper transport which results in copper accumulation and toxicity to the liver and brain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            23-NOV-1995 (first entry)
Wilson disease exon 5/intron borders.
Wilson disease exon 5/intron borders.

PRIOR APPLICATION DATA:

APPLICATION NUMBER: PCT/US94/12206
FILING DATE: US 25-OCT-1994
ATTOREX/ACENT INFORMATION:
NAME: DUNN, TRACY J.
REGISTRATION NUMBER: 16528X-003230US
REFERENCE/DOCKET NUMBER: 16528X-003230US
TELEPHONE: (415) 326-2400
TELEPHONE: (415) 326-2422
INFORMATION FOR SED ID NO: 43:
SEQUENCE CHARACTERISTICS:
LENOTH: 93 anino acids
TYPE: amino acid
STRANDDNESS: unknown

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 3, Application US/08769309A
Patent No. 5741890
GENERAL INFORMATION:
APPLICANT: Scott, John D.,
APPLICANT: Nauert, Brian J.,
APPLICANT: Rlauck, Theresa M.
TITLE OF INVENTION: Protein Binding Domains of Gravin NUMBER OF SEQUENCE: 24
CORRESPONDENCE ADDRESS: ADDRESSE: AD
GENERAL INFORMATION:
APPLICANT: Bishai, William R.
APPLICANT: Debalo, James
TITLE OF INVENTION: REGULATION OF A SIGMA FACTOR
TITLE OF INVENTION: FROM MYCOBACTERIUM TUBERCULOSIS
NUMBER OF SEQUENCES: 11
CORRESPONDENCE ADDRESS:
ADDRESSEE: Pillsbury Madison & Sutro, L.L.P.
STREET: 1100 New York Avenue, N.W.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MEDIUM TYPE: Floppy disk COMPUTER: IBM PC compatible OPERATING SYSTEM: PC-DOS/MS-DOS SOFTWARE: Patentin Release #1.0, Version #1.30 CURRENT APPLICATION DATA:

Sequence 12, Application US/08562114B

Patent No. 5972646

GENERAL INFORMATION:

APPLICANT: ERIKSSON ET AL.

TITLE OF INVENTION: ISOLATED NUCLEIC ACID MOLECULE WHICH CODES FOR A TITLE OF INVENTION: ALD WHICH ASSOCIATES WITH P63, A TITLE OF INVENTION: PORTION OF A RETINOL BINDING PROTEIN RECEPTOR CORRESPONDENCE ADDRESS:

CORRESPONDENCE: Belie & Lynch

STREET: 805 Third Avenue

CITY: New York City

STRIE: 10022

COMPUTER READABLE FORM:

MEDIUM TYPE: Diskette, 3.5 inch, 144 kb storage

COMPUTER: IBM

OPPRATING SYSTEM: US/08/562,114B

FILING DATE: 22-1404

PRIOR APPLICATION DATE:

APPLICATION NUMBER: US/08/562,114B

FILING DATE: 20-January-1995

FILING DATE: 20-January-1995

ATTORNEY ARGENT INFORMATION: THA 6372, 2 CTD

RESTRANTING SYSTEM: 37,003

RESIDENTAL VALORER: 37,003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                       ö

-!- FUNCTION: RESPONSIBLE FOR SYNTHESIS OF PSEUDOURIDINE FROM URACIL-
2650 IN 23S RIBOSOMAL RNA.
-!- CATALYTIC ACTIVITY: URACIL + D-RIBOSE 5-PHOSPHATE - PSEUDOURIDINE
5'-PHOSPHATE + H(2).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  915622;

Submitted (SEP-1995) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: MOLECULAR CHAPERONE; ASSIST THE FOLDING OF PROTEINS U
ATP HYDROLYSIS. KNOWN TO PLAY A ROLLE, IN VITRO, IN THE FOLDING
ACTIN AND TUBULIN. IN YEAST MAY PLAY A ROLLE IN MITOTIC SPINDLE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               -:- SUBUNIT: HETERO-OLIGOMERIC COMPLEX OF ABOUT 850 TO 900 KD THAT FORMS TWO STACKED RINGS, 12 TO 16 NM IN DIAMETER.
-:- SUBCELLULAR LOCATION: CYTOPLASMIC.
-:- SIMILARITY: BELONGS TO THE TCP-1 CHAPERONIN FAMILY.

PHOSPHORYLATED ON A NUMBER OF THE SERINES IN THIS MOTIF. IT IS THOUGHT THAT PHOSPHORYLATION OF NFH RESULTS IN THE BORMATION OF INTERFILMENT CROSS BRIDGES THAT ARE IMPORTANT IN THE MAINTENANCE OF AXONAL CALIBER.

PTM: PHOSPHORYLATION SEEMS TO PLAY A MAJOR ROLE IN THE FUNCTIONING OF THE LARGER NEUROPILAMENT POLYPEPTIDES (NF-M AND NF-H), THE LEVELS OF PHOSPHORYLATION BEING ALTERED DEVELOMENTALLY AND COINCIDENT WITH A CHANGE IN THE NEUROFILAMENT FUNCTION. SIMILARITY: BELONGS TO THE INTERMEDIATE FILAMENT FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

Sequence 182, Application US/08482080A

Patent No. 6010849

GENERAL INPORMATION:

APPLICANT: Edwards, Cynthia A.

APPLICANT: Andrews, Beth M.

APPLICANT: Turin, Lisa M.

TITLE OF INVENTION: Sequence-Directed DNA Binding

TITLE OF INVENTION: Sequence-Directed DNA Binding

TITLE OF INVENTION: 664

CORRESPONDENCE ADDRESS:

ADDRESSEE: Genelabs Technologies, Inc.

STREET: 505 Penobscot Drive

CITY: Redwood City

CONTY: REGWOOD CITY
                                                                                                                                                                                                                                                                                                                            seq_name: /cgn2_6/ptodata/1/ina/6_COMB.seq:US-08-482-080A-182

Xho I; Filarial nematode parasite of humans. Two adult
female worms of Onchocerca volvulus were isolated from
consenting patients and quick frozen. Adult female mRNA
was converted to double-stranded cDNA using reverse
transcriptase and oligo(dT) followed by RNASE H and DNA
poll. The library has 7 x 10E5 independent recombinants
and the average insert size is -1100bp.The library was
constructed by Michelle Lizotte-Wanlewski with worms
provided by Tr. Sara Lustigman. The library is available
from Dr. Steven A Williams, email: genome@smith.edu."

with a modified polylinker: plasmid DNA from the
normalized library NCI_CGAP_PT22 was prepared, and ss
circles were made in vitro. Following HAP purification,
this DNA was used as tracer in a subtractive hybridization
reaction. The driver was PCR-amplified cDNAs from a pool
of 5,000 clones made from the same library (clonerDs
985608-986759, 1101192-1101959, and 1217928-1220615).
Subtraction by Bento Soares and M. Fatima Bonaldo. "

The sequence contained an oligo-dr track that was present in the oligoniclectide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dr track served to identify it as a clone from the normalized brain stems library cDNA Library Preparation: M.B. Soares Lab Clone distribution: NIH BMAP CDNA clones will be made available by the means for distribution to be determined. When NIH determines the means for distribution of the BMAB cDNA clones, this record will be updated accordingly when that means is determined.

Seg primer: M13 Forward
